Projects

- **RFID Based POY-PTY Detection**, This project is "RFID Based POY-PTY Detection". Basically it is used in texturing company. In present condition, Existing system cannot identify which POY (Polyester Oriented Yarn) is defective. So, it produces defective PTY (Polyester Textured Yarn) because POY is raw material for PTY. So there are many losses in Polyester products. So, it can be possible to develop the application which can easily identify which POY is defected using RFID tag. Then it is easy to remove from raw material of PTY Product. So, it will cover the polyester loss and RFID tag which will be put in paper tube. This project will be developed in visual studio 2012 where the front end will be c# and back end is SQL Server 2010.
- **Online Shopping Kidszoop**, Kidszoop Online Shopping is a PHP Laravel-based project that revolves around creating an enchanting online shopping experience for parents and caregivers seeking the finest products for children. The platform is dedicated to offering an array of carefully selected items that encompass toys, stylish baby watches, and essential baby-care products.
- **API- JOBPORTALS(Basic-Crud)**, This project demonstrates the basic CRUD (Create, Read, Update, Delete) operations using Postman to interact with a simplified job portal API. The API will allow you to manage job listings, enabling you to add new jobs, update existing jobs, and delete jobs.
